Submitting Your Data

After you have completed your bird count, submit your data to eBird Caribbean at <http://ebird.org/caribbean>

Defining Your Count

Stationary Count: A count made from a single location. Examples are counting birds from an observation tower or in your backyard.

Traveling Count: A count where you do not remain in the same location with an estimate of the distance traveled. If you walk 2 km. on a trail and return via the same route, record the distance as 2 km. Only record new birds that you are certain you did not previously detect on the return. Examples of traveling counts are birding on a trail, driving an auto loop, and birding on a boat trip. Counts are most helpful when they cover relatively short distances (preferably less than 5km.).
